

As the demand for Green Line products increases around the world driven by the approaching implementation of international legislation, Phoenix gets a head start on lead free components by being one of the first and few passive component suppliers to offer a complete lead free resistors portfolio already since July 1st 2004.

The lead free technology presented in Phoenix products is perfectly suitable for soldering and immune to the formation of monocrystals (whiskers) on the wires' surface, as shown in the whisker formation test report now available in PDF downloadable format. You can find it in the Data Files section of Phoenix Passive Components' website: <http://www.phoenixdobrasil.com.br/>

Phoenix lead free resistors are compliant with the European ELV and RoHS directives. Contact us for more information.
