

WALL[®]

Wall Industries, Inc.

Notification of Intent to be in Compliance **With the RoHS directive by July 1, 2006**

Wall Industries, Inc. is committed to complying with EU directive 2002/95/EC, Restriction of Hazardous Substances (RoHS) by the current deadline of July 1, 2006. Although this effort is neither easy nor inexpensive, nonetheless it is being undertaken with full management commitment. All new component selection and product designs are currently occurring within RoHS guidelines. The conversion of our current components from lead solder mounting to lead-free solder mounting has been ongoing. Though our progress is somewhat gated by our suppliers, we constantly monitor our processes to insure product quality during this transition. Although some components remain that will not withstand the re-flow temperatures required and will need to be hand-placed and hand-soldered, Wall Industries is making every effort to replace all materials with RoHS-compatible components. Our goal is to make the transition as transparent as possible with respect to both cost and quality.
